# Factory Sleeve Option

DFD-150

All fire damper installations require the use of sleeves, angles and methods described in the installation instructions. Sleeves can be field fabricated or factory furnished as a completed damper/sleeve assembly.

Sleeves are galvanized steel and are available in 20 through 10 ga. (1mm - 3.5mm) thicknesses and lengths up to 36 in. (914mm).

"K" dimension specifies location of damper within the sleeve. Minimum is 4 in. (102mm), maximum is "L" less 4 in. (102mm), which allows for mounting angle installation, and duct connection at each end of the sleeve. If "K" dimension is not specified, it will be provided as one half of "L" dimension (damper centered in sleeve).

**Note: If using access doors, the door should be installed on the "K" side of the damper.**

## Sealed Option

When sealed option is selected, B transition will need to be field sealed in the area where duct to sleeve connection is made.

# Type A, B, & B2

**DFD-150**

Dampers larger than maximum single section sizes are supplied in 2 or more sections of equal size. Multi-section dampers are factory assembled ready for installation.
